Do not overfill with grease If unit is already torqued, replace steering wheel. If not then torque wheel nuts. Lbs 68115Nm. Youve only seen one page. Check out this post which is one of the most popular of all time. Searching through forums and youtube videos can get tedious, so I have gathered these tips together and run them by an experienced cart technician. These are the easy steps to perform a basic tuneup on your EZGo gasoline engine using a minimum of tools and an optional tuneup kit. Remove the lid and then the filter. Inspect the filter for oil and dust, and if it is only lightly dusty, use compressed air to blast as much of the soil out of the filter as possible. Reinstallation is the reverse of these steps. Remove the filter and inspect. If it is not oily, and only lightly dustcovered, you can blow the dust off with compressed air. If the filter is too cruddy, replace with a brand new filter. Remove the filter and inspect.

If it is not oily and lightly dustcovered, you can blow the dust off with compressed air. If the filter is too cruddy, replace with a brand new filter. Locate the spark plugs on the top of the engine and remove the cable, exposing the top of the plug. Use a spark plug socket and ratchet to remove the spark plug and inspect the ceramic insulator. Push the wire connector back on to the spark plug. Inspect the connector boot and wire for any cracking or damage and replace if needed. If the housing is clear plastic, make sure that the fuel inside is not dark amber or discolored from age. To remove the filter, disconnect the hose from the fuel pump by using a pair of pliers to squeeze the clamp ends together and sliding the expanded clamp further down the line. Raise the hose up and allow any excess fuel to drain back into the fuel tank. Put the hose back in place on the pump and secure the clamp with pliers again. Your judgment will be needed here to decide if you need to replace the filter or not. Sometimes there is a second filter located underneath the carburetor facing the front of the cart. Check to see if you have one and make sure it is also clear of deposits. You can identify it by the lock nut at the base of the screw. Once the engine is running at it's best, the lock screw is tightened down, the engine is shut off, and the drive belt is replaced. Note if the screw C has a square head instead of a flat blade slot, this takes a tool designed just for this purpose. You can, however, get around this by taking an old pair of pliers and grinding a Vshaped groove lengthwise in the jaws . Set these aside and inspect the rocker arm assembly. Turn the engine by hand to point the

cam lobe D down on the first rocker you are checking. Set these aside and inspect the rocker arm assembly. Turn the engine by hand to point the cam lobe D down on the first rocker you are checking. Set these aside and inspect the rocker arm assembly.

Turn the engine by hand to point the cam lobe D down on the first rocker you are checking. Inspect the gasket and wipe clean before putting the cover back on after the adjustment. Turn the engine crank pulley by hand until the compression stroke is at top dead center. Insert a.004 feeler gauge E as shown between the tappet D and the valve stem. There should be a slight drag when you slide the gauge back and forth, and if the clearance is too high, you need to adjust it in. If you cannot get the gauge to slide in, then you don't have enough clearance. When the clearance is such that the feeler gauge begins to drag between the rocker and the valve, use the 3mm hex wrench to lock it back down while holding the 14mm nut in place with the wrench. Replace the rocker cover and secure it back into place with the four bolts. Amazon carries these tuneup kits, and all you have to do is identify which kit matches your cart. Good Luck and happy cruising! They come in either analog or digital, square or round. Continue Reading A bank of golf cart batteries doesn't charge while driving your cart around. Battery charging is. Continue Reading There are literally thousands of golf carts in my little township, and I am covering all of the types and models I encounter here. Provides an overview of key features, functions and operational tips. The Roland Worldwide Social Network keeps you connected to the latest products, exciting events, and much more. This number will usually be One letter followed by 3 to 4 numbers. In that case the last two digits are the year it was made. The serial number is a 6 or 7 digit number that does NOT indicate the model year. The manufacturers code DOES include the model year. This number will usually be One letter followed by 3 to 4 numbers. In that case the last two digits are the year it was made. The serial number is a 6 or 7 digit number that does NOT indicate the model year. Golf carts prior to 1981, the serial number can be found on the vehicle frame. For G2 models made between 1988 and 1990, the serial number can be found under the seat where the floor board meets the motor compartment. If your cart starts showing these symptoms, the first thing you should look at is your speed controller. You will likely find the switch under the seat of your golf cart, but if you're having trouble finding it, consult your owner's manual. Once disconnected, you should remove the speed controller cover and then reconnect the negative cable. Sometimes the problem can be as simple as some loose wiring and all you need to do is make sure everything is plugged in tight.

Lastly, you can check the voltage of the controller battery by connecting both the positive and negative probes to the battery. If there is an issue with your cart's solenoid, some of the symptoms

can be the same as a malfunctioning speed controller. Attach the positive probe to the solenoid post nearest the battery and get the reading. If the solenoid and battery readings are identical, there is an issue with the solenoid. However, if the reading isn't at least 3 volts less than the battery, the problem is with the resistor and it should be replaced. The two possible problems you can identify this way is either a bad speed controller, or a bad directional switch or motor. If you do, we hope you can use the steps in this article to help you identify and fix the issue. Mt Pleasant, SC 29464 843 8818894.
